Abstracts

Track Geometry Measurement System is an essential parameter of track condition. Track geometry measurement system is used to measure the condition of a railway track in order to avoid any detrimental effects on passengers and freight. The track geometry measurement system (TGMS) provides precise and reliable track data for short-term as well as long-term maintenance scheduling in order to avoid any harmful effects. The inertial-based track geometry measurement system is gaining popularity currently. The inertial-based track geometry measurement system is a compact and lightweight system and provides an accurate evaluation of rail track geometry in various operational conditions.
