Abstracts

Track lighting is a method of illumination where the luminaire is mounted anywhere in a continuous track device containing electrical conductors. This is the opposite of routing wires to individual lamps. The track can be mounted on a ceiling or wall, longitudinally down the beam, or laterally through the tweezers or joists. They can also be hung in particularly high places, such as vaulted ceilings.

This report elaborates the market size, market characteristics, and market growth of the Track Lighting industry, and breaks down according to the type, application, and consumption area of Track Lighting. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Track Lighting in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
