Abstracts

A transducer is a device which converts the quantity being measured into an optical, mechanical, or - more commonly - electrical signal.

- The energy-conversion process that takes place is referred to as transduction.
- Transducers are classified according to the transduction principle involved and the form of the measurand. Thus a resistance transducer for measuring displacement is classified as a resistance displacement transducer.

This report elaborates the market size, market characteristics, and market growth of the Transducers industry, and breaks down according to the type, application, and consumption area of Transducers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Transducers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
