Abstracts

Radar control system is an equipment of providing air traffic control services with the use of radar. The provision of air traffic control services without the use of radar is called procedural control. With the evolution of technology, the requirement of transportable radar control system was generated. Transportable radar control system (TRCS) is a compact air traffic control system transportable by a truck, aircraft or helicopter.

Transportable Radar Control System (TRCS) is used for air traffic communication, navigation, and surveillance. It ensures safety and efficiency in the operation of aircraft, organizes the flow of air traffic, and helps to avoid collision of aircraft. ATC equipment enables air traffic controllers to communicate with the aircraft, provides navigational services, and monitors and manages the air traffic.

This report elaborates the market size, market characteristics, and market growth of the Transportable Radar Control System (TRCS) industry, and breaks down according to the type, application, and consumption area of Transportable Radar Control System (TRCS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Transportable Radar Control System (TRCS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
