Abstracts

Trauma fixation devices are used for treatment of internal injuries, such as dislocations, fractures, bruises and external injuries, burns, cuts, and others such injuries. Internal fixation devices are implanted into the body for the stabilization of severe fractures and dislocations, and deformity correction procedures. Whereas, external fixation devices are used to hold the bone in place by means of an external frame in cases of open fractures, severe soft tissue damage and burn injuries. These devices help to align fractured bones, prevent improper bone recovery, promote faster healing of external injuries, and complete repair of internal injuries.

This report elaborates the market size, market characteristics, and market growth of the Trauma Fixation Devices industry, and breaks down according to the type, application, and consumption area of Trauma Fixation Devices. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Trauma Fixation Devices in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
