Abstracts

Trimethylaluminium is one of the simplest examples of an organoaluminium compound. Despite its name it has the formula $\text{Al}_2(\text{CH}_3)_6$ (abbreviated as Al_2Me_6 or TMA) as it exists as a dimer. This colorless liquid is an industrially important compound but must be handled with care due to its pyrophoricity; it evolves white smoke (aluminium oxides) when the vapor is released into the air.

This report elaborates the market size, market characteristics, and market growth of the Trimethylaluminum industry, and breaks down according to the type, application, and consumption area of Trimethylaluminum. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Trimethylaluminum in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
