## **Abstracts**

Truck bedliner or simply Bedliner are products that shield the inner-side of a truck bed from damage and also can create a skid-resistant surface allowing cargo to stay in place, depending on circumstances. There are two broad classifications of bedliners: 'Drop-in' and 'Spray-on/in'. 'Drop-in ' bedliners are easily applied to the truck bed with no preparation work required, and can be easily removed as well for cleaning. Spray-in bedliners require specific preparation to allow the coating to adhere correctly to the bed; the better the coating adheres will determine how long it will last.

This report elaborates the market size, market characteristics, and market growth of the Truck Bedliners industry, and breaks down according to the type, application, and consumption area of Truck Bedliners. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Truck Bedliners in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
