## Abstracts

A turbo compressor is a turbine that concentrates compressible gases with the help of dynamic principles. In a turbocompressor, gas continuously enters a rotating impeller through which mechanical shaft power is distributed to the fluid with the aid of the vanes, resulting in significant pressure and temperature increases. The remaining kinetic energy is then converted to pressure primarily in the diffuser.

This report elaborates the market size, market characteristics, and market growth of the Turbocompressor industry, and breaks down according to the type, application, and consumption area of Turbocompressor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Turbocompressor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
