Abstracts

TV White Space refers to the unused TV channels between the active ones in the VHF and UHF spectrum. These are typically referred to as the “buffer” channels. In the past, these buffers were placed between active TV channels to protect broadcasting interference. It has since been researched and proven that this unused spectrum can be used to provide broadband Internet access while operating harmoniously with surrounding TV channels. TV white space technology is also known as ‘Super Wi-Fi.’ This report elaborates the market size, market characteristics, and market growth of the TV White Space Technology industry, and breaks down according to the type, application, and consumption area of TV White Space Technology. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
