Abstracts

UHT Coconut Milk is Coconut milk processed by UHT. Ultra-high temperature processing (UHT), ultra-heat treatment, or ultra-pasteurization is a food processing technology that sterilizes liquid food, chiefly milk, by heating it above 135 °C (275 °F) – the temperature required to kill spores in milk – for 1 to 2 seconds. Coconut milk is the liquid that comes from the grated pulp of a mature coconut. The opacity and rich taste of coconut milk are due to its high oil content, most of which is saturated fat. Coconut milk is a popular food ingredient used in Southeast Asia, South Asia, the Caribbean, and northern South America.

This report elaborates the market size, market characteristics, and market growth of the UHT Coconut Milk industry, and breaks down according to the type, application, and consumption area of UHT Coconut Milk. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
