Abstracts

uPVC is used for the majority of plastic pipes in the world, as it is incredibly resistant to chemical erosion and has smoother inner walls that help to encourage water flow. It also functions well in a wide range of temperatures and operating pressures. It is incredibly strong, stiff and cost-effective, and so is often used for sewage lines and exterior drainage pipes. Even so, uPVC piping is much less common in the U.S., where PVC piping is preferred.

This report elaborates the market size, market characteristics, and market growth of the UPVC Pipes industry, and breaks down according to the type, application, and consumption area of UPVC Pipes. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for UPVC Pipes in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
