Abstracts

USB Drive is an external hard disk drive or optical disc drive that plugs into the USB port. It is a solid-state storage module that plugs into the computer's USB port. Using flash memory chips that hold up to one terabyte of data, the solid-state USB drive emulates a hard disk. USB drives are extremely popular for backup as well as data transfer from one machine to another. They can also hold an operating system and be used to boot the computer. Their ever-increasing storage capacities have mostly obsoleted writable CDs and DVDs.

This report elaborates the market size, market characteristics, and market growth of the USB Drives industry, and breaks down according to the type, application, and consumption area of USB Drives. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for USB Drives in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
