Abstracts

UV printing is a form of digital printing that uses ultra-violet lights to dry or cure ink as it is printed. As the printer distributes ink on the surface of a material (called a 'substrate'), specially designed UV lights follow close behind, curing - or drying - the ink instantly. This report elaborates the market size, market characteristics, and market growth of the UV Inkjet Printer industry, and breaks down according to the type, application, and consumption area of UV Inkjet Printer. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
