Abstracts

The terms user experience (UX) design and user interface (UI) design are often confused and interchanged, but they are different things. When people think about software design they are usually thinking about the UI design. UI design focuses on what the interface looks like and the optimal arrangement of elements on the screen.

The goal of UX design is to delight the user by combining efficient, fast functioning software with an intuitive, goal-centered UI design that considers user personas and the context in which they interact with the application. In order to achieve this, you must have a really good and thorough understanding of your users, and a UX designer that cares about how people feel when they interact with your software.

This report elaborates the market size, market characteristics, and market growth of the UX Software industry, and breaks down according to the type, application, and consumption area of UX Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
