## Abstracts

Vanadium is a rare chemical element. It is soft, silvery grey, ductile transition metal. The compound is available in chemically combined forms, which occurs naturally in about 65 different minerals and fossil fuel deposits. It is mined mostly in South Africa, northwestern China, and eastern Russia. It is generally produced through the process of steel smelter slag. In addition, vanadium is also produced by the flue dust of heavy oil or as a by-product of uranium mining.

This report elaborates the market size, market characteristics, and market growth of the Vanadio industry, and breaks down according to the type, application, and consumption area of Vanadio. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Vanadio in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
