Abstracts

The live attenuated varicella vaccine is a freeze-dried varicella attenuated live virus OKA strain of not less than 103.3 PFU. The live attenuated varicella vaccine is a lyophilized product obtained by breeding varicella virus (OKA strain) on human diploid cells. This product is a suspension for subcutaneous injection: the lyophilized vaccine pellet is milky white to pale yellow or light pink loose in a glass vial, and the diluent is a colorless clear liquid. The live attenuated varicella vaccine is used for active immunization of individuals who have never been infected with chickenpox to prevent infection with varicella virus.

This report elaborates the market size, market characteristics, and market growth of the Varicella Attenuated Live Vaccine industry, and breaks down according to the type, application, and consumption area of Varicella Attenuated Live Vaccine.
