Abstracts

Volatile corrosion inhibitors (VCI) are a type of corrosion inhibitor that are used to protect ferrous materials and nonferrous metals against corrosion or oxidation where it is impractical to apply surface treatments. They slowly release compounds within a sealed airspace that actively prevents surface corrosion. A typical application is to protect stored tools or parts inside bags, boxes or cupboards, one advantage of VCIs being that if the container is opened and reclosed, levels of inhibitor will recover.

This report elaborates the market size, market characteristics, and market growth of the Vci Anti Rust Paper industry, and breaks down according to the type, application, and consumption area of Vci Anti Rust Paper. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Vci Anti Rust Paper in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
