Abstracts

Vehicle retarders are friction-based brake systems used to enhance or replace some of the main functions of equipment, usually in heavy-duty vehicles. Vehicle retarders are used to decelerate vehicles, which are often used as an additional 'assist' to slow down the vehicle, completing the final brake with a conventional friction brake system. Due to the low use of friction brakes, especially at higher speeds, their service life is increased, and since the brakes are pneumatic in those vehicles, they also contribute to saving air pressure.

This report elaborates the market size, market characteristics, and market growth of the Vehicle Retarder industry, and breaks down according to the type, application, and consumption area of Vehicle Retarder. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Vehicle Retarder in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
