## Abstracts

Plywood is a type of wood product, an engineered wood. It is a panel made of wood, manufactured from thin sheets of wood veneer that are stuck together. Due to its improved qualities, such as resistance to shrinkage, splitting, cracking and twisting, it finds application as a substitute for wood. Veneer is a thin decorative covering of fine wood applied to a coarser wood or other material.

This report elaborates the market size, market characteristics, and market growth of the Veneer and Plywood industry, and breaks down according to the type, application, and consumption area of Veneer and Plywood. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Veneer and Plywood in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
