Abstracts

In animals, anesthesia is used for a different circumstance, as animal lacks the ability to cooperate during diagnosis and therapeutic procedures. Anesthesia medication is majorly used to minimize the surgical stress and pain management. Anesthesia can be delivered through different routes. However, anesthesia via air pressure using anesthesia machines is a safe, secure and widely adopted mode. The concept of anesthesia machines has been evolved from standalone to portable wireless devices that comprise monitors and information systems. Currently, the manufacturers are introducing anesthesia machines with more advanced features such as new mode of ventilation, clear picture offering loops and graphical screens.

This report elaborates the market size, market characteristics, and market growth of the Veterinary Anesthesia Machine industry, and breaks down according to the type, application, and consumption area of Veterinary Anesthesia Machine.
