## Abstracts

Air-ground communication systems offer a medium of transmission of secure data between air traffic controllers and pilots. The VHF or very high-frequency bandwidth has been integrated into multiple aircraft for communicating securely in the 117.975-137 MHz range. The steady rise in air traffic has made it vital for airports to adopt air-ground communication stations to prevent accidents and ensure the efficiency of airlines. This report elaborates the market size, market characteristics, and market growth of the VHF Air-Ground Communications Stations industry, and breaks down according to the type, application, and consumption area of VHF Air-Ground Communications Stations. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for VHF Air-Ground Communications Stations in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
