Abstracts

Video Conferencing comprises the technologies for the reception and transmission of audio-video signals by users at different locations, for communication between people in real-time. A Video Conferencing is a telephone with a video display, capable of simultaneous video and audio for communication between people in real-time. Videoconferencing implies the use of this technology for a group or organizational meeting rather than for individuals, in a videoconference. Telepresence may refer either to a high-quality videotelephony system (where the goal is to create the illusion that remote participants are in the same room) or to meetup technology, which goes beyond video into robotics (such as moving around the room or physically manipulating objects).

This report elaborates the market size, market characteristics, and market growth of the Video Conferencing Equipment industry, and breaks down according to the type, application, and consumption area of Video Conferencing Equipment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Video Conferencing Equipment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
