Abstracts

The video projector uses a video source input that plays internally on a small screen. Light is illuminated through the screen and then captured and focused through the lens or multiple lenses to be displayed on a surface at a given distance. Most projectors today are digital projectors. Commonly used technologies in video projectors include digital light projection (DLP), liquid crystal display (LCD), and liquid crystal on silicon (LCoS). Video projectors can use different light sources such as high pressure mercury lamps, light emitting diodes (LEDs), laser diodes and hybrid LED/laser diode systems. This report elaborates the market size, market characteristics, and market growth of the Video Projectors industry, and breaks down according to the type, application, and consumption area of Video Projectors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
