Abstracts

A virtual desktop infrastructure (VDI) solution can be considered a platform in which a client server is employed to access a user system virtually. This type of computing model makes use of a centralized storage space, where data and system applications are stored centrally on the server. End-users have to enter their login details to gain remote access to these applications and data from any location. However, establishing such a setup requires an uninterrupted network.

This report elaborates the market size, market characteristics, and market growth of the Virtual Desktop Infrastructure (VDI) industry, and breaks down according to the type, application, and consumption area of Virtual Desktop Infrastructure (VDI). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Virtual Desktop Infrastructure (VDI) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
