Abstracts

Virtualization is a process that simulates both software and hardware on a computer using cloud to enable users to receive resources as a service over the Internet. Cloud computing involves the conversion of specific machines to a virtual image on a server within the cloud. Cloud virtualization software acts as an intermediary between cloud-based services and end-user systems. It helps in reducing operational costs and increasing efficiency of the entire network interface. Cloud virtualization solutions are not centralized and remain unaffected by natural calamities or power failures. However, this can lead to problems related to data security and privacy.

This report elaborates the market size, market characteristics, and market growth of the Virtualization and Cloud Management Software industry, and breaks down according to the type, application, and consumption area of Virtualization and Cloud Management Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Virtualization and Cloud Management Software in a special period.
