Abstracts

Virtualized Radio Access Network refers to a RAN (Radio Access Network) implementation where some or all baseband functions are separated from the remote radio unit and run as VNFs (Virtualized Network Functions) on commodity hardware. This approach results in multiple operational benefits including but not limited to TCO (Total Cost of Ownership) reduction, performance gains and scalability. In addition, vRAN enables mobile operators to future-proof their networks for 5G upgrades.

This report elaborates the market size, market characteristics, and market growth of the Virtualized Radio Access Network industry, and breaks down according to the type, application, and consumption area of Virtualized Radio Access Network. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Virtualized Radio Access Network in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
