Abstracts

Vitamin E is a major lipid-soluble antioxidant found in the cell system, which is solely obtained from consumption of food. It comprises two families of compounds: tocotrienols and tocopherol. Vegetable oils made from sunflower, olive, corn, rapeseed, and soybean along with oil-based nuts, spreads, and seeds, cereals, and egg yolk are a rich source of vitamin E. Dietary supplement-based vitamin E is available in the form of energy drinks, capsules, and tablets. Vitamin E helps in maintaining strong immunity, healthy eyes, and soft skin along with protecting cells from damage and has properties to prevent cancer, heart diseases, diabetes, and Alzheimer's. Furthermore, vitamin E supplements also help in treating vitamin deficiency.
