Abstracts

Volatile organic compounds or 'VOC' are organic chemicals that have a high vapor pressure at normal atmospheric pressure and temperature. VOC molecules are complex and easily decomposed by high-energy photons. VOC sensors use a bright ultraviolet light source to separate electrons from VOC molecules; the electrons are measured and their flow indicates the presence of VOC molecules on the sensor. This report elaborates the market size, market characteristics, and market growth of the VOCs Sensors industry, and breaks down according to the type, application, and consumption area of VOCs Sensors. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for VOCs Sensors in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
