Abstracts

Voice over Internet Protocol (VoIP), is a technology that allows you to make voice calls using a broadband Internet connection instead of a regular (or analog) phone line. Some VoIP services may only allow you to call other people using the same service, but others may allow you to call anyone who has a telephone number - including local, long-distance, mobile, and international numbers. Also, while some VoIP services only work over your computer or a special VoIP phone, other services allow you to use a traditional phone connected to a VoIP adapter.

This report elaborates the market size, market characteristics, and market growth of the VoIP Software industry, and breaks down according to the type, application, and consumption area of VoIP Software. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
