Abstracts

WTE (Waste-to-Energy) is the process of generating energy in the form of electricity and/or heat from the primary treatment of waste. WTE is a form of energy recovery. Most WTE processes produce electricity and/or heat directly through combustion, or produce a combustible fuel commodity, such as methane, methanol, ethanol or synthetic fuels.

This report elaborates the market size, market characteristics, and market growth of the Waste-to-Fuel Technologies industry, and breaks down according to the type, application, and consumption area of Waste-to-Fuel Technologies. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Waste-to-Fuel Technologies in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
