## **Abstracts**

A watch movement, also known as a caliber, is the mechanism of a watch or timepiece, as opposed to the case, which encloses and protects the movement, and the face, which displays the time. The term originated with mechanical timepieces, whose clockwork movements are made of many moving parts. It is less frequently applied to modern electronic or quartz timepieces, where the word module is often used instead. This report elaborates the market size, market characteristics, and market growth of the Watch Movement industry, and breaks down according to the type, application, and consumption area of Watch Movement. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Watch Movement in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
