Abstracts

A water pump is a mechanical device that is designed to circulate coolant through water-cooled engines. Although not all water-cooled engines use water pumps, these components are at the heart of nearly all modern water cooling systems. Water pumps are typically driven via the rotation of the crankshaft, although that can be accomplished in a variety of different ways. There are also a number of different styles of pumps that are commonly used.

This report elaborates the market size, market characteristics, and market growth of the Water Pump industry, and breaks down according to the type, application, and consumption area of Water Pump. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Water Pump in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
