Abstracts

Water Tower is a high-rise structure for storing water and distributing water. It maintains and regulates the amount of water and water pressure in the water distribution network. Mainly consists of tanks, foundations, and connections. In industrial and civil buildings, the water tower is a relatively common and special building. Its construction requires special meticulous attention and skill. If the construction quality is not good, it will cause permanent leakage of water. Or even worse, it will be scrapped and cannot be used.

This report elaborates the market size, market characteristics, and market growth of the Water Tower industry, and breaks down according to the type, application, and consumption area of Water Tower. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Water Tower in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
