Abstracts

Wastewater treatment is a process used to convert wastewater into an effluent that can be returned to the water cycle with minimum impact on the environment, or directly reused. The latter is called water reclamation because treated wastewater can then be used for other purposes. The treatment process takes place in a wastewater treatment plant (WWTP), often referred to as a Water Resource Recovery Facility (WRRF) or a sewage treatment plant. Pollutants in municipal wastewater (households and small industries) are removed or broken down.

This report elaborates the market size, market characteristics, and market growth of the Water & Wastewater Treatment industry, and breaks down according to the type, application, and consumption area of Water & Wastewater Treatment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Water & Wastewater Treatment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
