## Abstracts

The wave-piercing catamaran has a very fine bow shape with reduced buoyancy at the front. When encountering waves, the lack of buoyancy means that the hull passes through the water rather than over the top, resulting in a smoother ride than conventional designs and reducing the mechanical stress on the ship and crew. It also reduces the ship's wave resistance.

This report elaborates the market size, market characteristics, and market growth of the Wave-Piercing Catamarans industry, and breaks down according to the type, application, and consumption area of Wave-Piercing Catamarans. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wave-Piercing Catamarans in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
