Abstracts

Wide-bandgap semiconductors (WBG or WBGS) are semiconductor materials which have a relatively large band gap compared to typical semiconductors. A single WBG device can be used to make a complete radio system, eliminating the need for separate signal and radio frequency components, while operating at higher frequencies and power levels.

This report elaborates the market size, market characteristics, and market growth of the WBG Power Devices industry, and breaks down according to the type, application, and consumption area of WBG Power Devices. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for WBG Power Devices in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
