Abstracts

The weather impacts everything – from underwriting property and insuring against rainfall, to forecasting crop yields and planning exercises for national security. Yet, attempts to mitigate the impact of weather across operations and assets are spotty and often incomplete.

Weather forecasting is the application of science and technology to predict the conditions of the atmosphere for a given location and time. Human beings have attempted to predict the weather informally for millennia and formally since the 19th century. Weather forecasts are made by collecting quantitative data about the current state of the atmosphere at a given place and using meteorology to project how the atmosphere will change.

This report elaborates the market size, market characteristics, and market growth of the Weather Analytics industry, and breaks down according to the type, application, and consumption area of Weather Analytics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Weather Analytics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
