Abstracts

Weather-based controllers use weather data to calculate evapotranspiration, the amount of water that evaporates from the soil surface or is used by the plant. Based on local weather conditions, these smart controllers automatically adjust the irrigation schedule to deliver only enough water to meet the plant needs.

This report elaborates the market size, market characteristics, and market growth of the Weather-based Irrigation Controllers industry, and breaks down according to the type, application, and consumption area of Weather-based Irrigation Controllers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
