Abstracts

Welded geogrid is a geo-synthetic material formed by joining intersecting ribs and is used to stabilize terrain. Welded geogrids are mainly made up of polymers such as polypropylene, high-density polyethylene, and polyester. They are used as a base reinforcement, to reinforce retaining walls, and subsoils below roads or structures.

This report elaborates the market size, market characteristics, and market growth of the Welded Geogrid industry, and breaks down according to the type, application, and consumption area of Welded Geogrid. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Welded Geogrid in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
