Abstracts

Welding is among several key application areas of respiratory protective equipment. Workers in the welding industry including welders, solderers, and brazers are exposed to various occupational hazards such as intense visible light and harmful radiation, burns, sparks, and airborne particulate matter. In addition, workers face risks such as lung cancer, changes in lung functions, airway irritation, pulmonary infections, and bronchitis. Such hazards to the respiratory system can be avoided using welding respiratory systems.

This report elaborates the market size, market characteristics, and market growth of the Welding Respiratory Systems industry, and breaks down according to the type, application, and consumption area of Welding Respiratory Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Welding Respiratory Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
