Abstracts

Excavator is a machine that is used to dig out soil mainly for construction purposes. These machines have a vast application in heavy construction activities wherein the soil is excavated and pulled back to the machine using hydraulic force. The effectivity of the excavator is examined by the time taken by the machine to load the fitted bucket from the source, brought back to the machine, and again dug in. Excavators are available in varied sizes depending on the bucket size, arm length, boom length, and operational speed. Different types of excavators include wheeled, crawler, suction, dragline, and others.

This report elaborates the market size, market characteristics, and market growth of the Wheeled Excavator industry, and breaks down according to the type, application, and consumption area of Wheeled Excavator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wheeled Excavator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
