Abstracts

WiFi Access Point is a networking device that allows easy access to the Internet over the air. Most access points look very similar to routers. An access point receives data by wired Ethernet, and converts to a 2.4Gig or 5Gig Hz wireless signal. It sends and receives wireless traffic to and from nearby wireless clients. An access point is different from a wireless router, in that it does not have firewall functions, and will not protect your local network against threats from the Internet.

This report elaborates the market size, market characteristics, and market growth of the WiFi Access Point industry, and breaks down according to the type, application, and consumption area of WiFi Access Point. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for WiFi Access Point in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
