Abstracts

A simple wind turbine consists of three main parts, the blades, shaft and generator: 1) Blades: The blade acts as barriers to the wind. When the wind forces the blade to move, some of the wind energy is transferred to the rotor.

This report elaborates the market size, market characteristics, and market growth of the Wind Turbine Components industry, and breaks down according to the type, application, and consumption area of Wind Turbine Components. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wind Turbine Components in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
