## Abstracts

Wiper blade is a device for keeping windows clean, and when they sweep water, it passes back and forth through the windshield. A wiper blade is mainly composed of a pivot sleeve, two end rings, spring steel plates and rubber strips. The spring steel plate in the wiper blade spreads the pressure throughout, so that all parts of the wiper blade are subjected to an average force, eliminating rain marks and scratches on the windshield. Wiper blades can be used for a longer period of time, with uniform force, sun protection, simple structure and light weight.

This report elaborates the market size, market characteristics, and market growth of the Wiper Blade industry, and breaks down according to the type, application, and consumption area of Wiper Blade. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wiper Blade in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
