Abstracts

Wire wound surface mount inductors are passive circuit components, meaning they require an external power source. They have a core made of a magnetic metal like iron with wire wound around it. Energy is stored in a magnetic field when an electrical current flows through the coiled wire which has thick insulation to make the inductors suitable for use with larger currents.

This report elaborates the market size, market characteristics, and market growth of the Wire-Wound Surface Mount Inductor industry, and breaks down according to the type, application, and consumption area of Wire-Wound Surface Mount Inductor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wire-Wound Surface Mount Inductor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
