Abstracts

A wireless connection means not connecting to a computer network through any type of cable. The use of wireless networks enables businesses to avoid the expensive process of introducing cables into buildings or as connections between different device locations. The basis of a wireless system is radio waves, which is an implementation that takes place at the physical level of the network structure. Wireless connections use radio waves to connect devices such as laptops to the Internet, business networks and applications. When the laptop is connected to a Wi-Fi hotspot in a public place, a connection to the company's wireless network is established.

This report elaborates the market size, market characteristics, and market growth of the Wireless Connectivity industry, and breaks down according to the type, application, and consumption area of Wireless Connectivity. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wireless Connectivity in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
