Abstracts

Wireless intrusion detection systems (WIDS) and wireless intrusion protection systems (WIPS) are used to continuously protect a wireless network and in some cases, a wired network, from unauthorized users. There are some basic differences between the two systems. In a WIDS, a system of sensors is used to monitor the network for the intrusion of unauthorized devices, such as rogue access points. In a WIPS, the system not only detects unauthorized devices, but also takes steps to mitigate the threat by containing the device and detaching it from the wireless network.

This report elaborates the market size, market characteristics, and market growth of the Wireless Intrusion Detection and Prevention Systems (WIPDS) industry, and breaks down according to the type, application, and consumption area of Wireless Intrusion Detection and Prevention Systems (WIPDS). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wireless Intrusion Detection and Prevention Systems (WIPDS) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
