Abstracts

Wood preservation chemicals are used to protect wooden products from decaying, decomposition, fire or other hazards. These chemicals increase life span by restricting attacks from insects, bacteria and fungus. Wood preservation has gained critical importance in the recent years owing to stringent regulations that limit wood usage. Wooden products are protected by chemicals and several treatment methods that elongate their operational life and lower maintenance cost.

This report elaborates the market size, market characteristics, and market growth of the Wood Preservative Treatment Chemical industry, and breaks down according to the type, application, and consumption area of Wood Preservative Treatment Chemical. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
