Abstracts

Wood recycling is a process which involves the collection of waste wood generated by various end-users, and are recycled for further use in other applications such as wood panel manufacturing, animal bedding, energy generation, etc. The demand for wood recycling is increasing significantly due to the rising efforts to reduce tree cutting for making fresh wood. Despite many efforts to effective wood recycling, there is still a substantial volume that ends up in landfills every year. This process is environmentally unsustainable and expensive.

This report elaborates the market size, market characteristics, and market growth of the Wood Recycling industry, and breaks down according to the type, application, and consumption area of Wood Recycling. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Wood Recycling in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
