Abstracts

Wound fillers are a set of items that include gels, foams, pads, pastes, ropes, or any other formulation that does not stick. They are used to fill the wound and fulfill the duties of managing the moisture and absorbing the exudate. A secondary dressing has to be used over them as they are primary dressings and need to be secured in place. These wound packing products are used in deep wounds where there is a possibility of the exudate pooling in the vacant space. The absorbency of the filler depends on the product used.

This report elaborates the market size, market characteristics, and market growth of the wound filler industry, and breaks down according to the type, application, and consumption area of wound filler. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for wound filler in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
